

Introduction to 8085 Trainer Kit

Introduction:

ST8085-01 Kit is a single board Microprocessor Training Kit based on 8085 Microprocessor, which is widely used to train engineers to develop software/hardware for any industrial Process and Control.

ST8085-01 Provides powerful monitor EPROM & user's RAM with Battery Backup. The Kit has 28 Keys Hexadecimal Keyboard and six digit seven segment display for any data entry/display. The Kit also has capability of interacting with PC through RS-232C Serial Link.

The input/output structure of ST8085-01 Provides 24 Programmable I/O Lines using 8255 (ST8085-01)/48 Programmable I/O Lines using 2 Nos of 8255. It has got 16-bit 3 channel Programmable Timer/Counter using 8253.

The on board residents system monitor software is very powerful and provides various software utilities like Insert, Delete, Block move etc. which are very helpful in debugging the software.

The ST8085-01 Provides EPROM Programmer for burning any 27 series EPROM's. The bus of CPU is available on 50 pin PRC connector which can be used to connect other systems through bus.

Experiment No. 1

- Objective: WAP to add two 8 bit Number.

Flow Chart (or) algorithm:

- 1.) Move the data 1 into accumulator
- 2.) Move data 2 in a general Purpose register.
- 3.) Add Content of accumulator to the Content of general Purpose register.
- 4.) Store the result into memory
- 5.) Stop.

Program:

Label	Memory Address	Mnemonics	Hex Code	Comment
1.	2000	MVIA	3E	
2.	2001		08	
3.	2002	MVI B	06	
4.	2003		04	
5.	2004	ADD B	80	
6.	2005	STA	32	
7.	2006		00	
8.	2007		30	
9.	2008	HLT	76	

Input/Output: Input: 08, 04

Output: 0C stored at location 3000

UNIVERSITY

BCSC0806 MICROPROCESSOR LAB

Experiment No. 2.

- Objective: WAP to Subtract two 8-bit Numbers .

Flow Chart (or) algorithm:

- 1.) Move a number into accumulator
- 2.) Move second number in a general Purpose register .
- 3.) Subtract the content of accumulator and register .
- 4.) Store result in memory
- 5.) Stop.
