

Subject Code : BCSE0731: MACHINE LEARNING LAB

Lab (Day 01)

(Python)

1. Write a python code to reverse a string.
2. Write a python code to determine if a string is a palindrome.
3. Write a python code to determine if a number is a palindrome.
4. Write a python code to reverse a list without using built-in functions.
5. Write a python code to find the minimum & maximum element in an array?

(Numpy)

1. Write a python code to implement Numpy Task given below.
 - (i) Take 10 numbers from users and save into the array.
 - (ii) Print 2 to 8 numbers in numpy.
 - (iii) Reshape the array in 5th dimensional array.
2. Write a python code to implement Numpy Task given below.
 - (i) Write a python code to generate 20 random numbers.
 - (ii) Sort the numbers without using the sort() function.
 - (iii) Split the array into 4 sections.
 - (iv) Join the 4 sections into 2 sections and print the array.

(Pandas)

1. Create a dataframe to add columns like Name, Roll, Department & College Name.
2. Fill the columns with a minimum 10 columns.
3. Analyze the dataframe with the functions Head() & Tail().
4. Use info() & describe() function.
5. Find out co-relations between the columns.
6. Convert the DataFrame into *.CSV & *.excel file.
